FISCAL IMPACT STATEMENT

LS 6791

BILL NUMBER: SB 517

NOTE PREPARED: Jan 16, 2009

BILL AMENDED:

SUBJECT: General Assembly Access to Research Resources.

FIRST AUTHOR: Sen. Delph

FIRST SPONSOR:

BILL STATUS: As Introduced

FUNDS AFFECTED: X GENERAL
DEDICATED
FEDERAL

IMPACT: State

Summary of Legislation: The bill requires state educational institutions to make research tools used by state educational institutions available to legislators and staff of the Legislative Services Agency.

Effective Date: July 1, 2009.

Explanation of State Expenditures: The bill would provide legislators and LSA staff with access, free of charge, to state educational institution research tools, provided the use of the research tools is related to carrying out the official duties of a state legislator. A research tool includes: (1) online research services; (2) online and hard copy subscriptions to publications; and (3) any other source of information used for research available to an educational institution. The bill also exempts from the access requirement research tools purchased through a grant or other source that limits access in a way that would make granting access under the bill a violation of the grant or agreement covering the payment for the research tool.

The potential administrative impact on state educational institutions likely will relate to access to library services, and library research materials and resources in hard copy and electronic medium. (Note: Currently, state educational institutions have been asked to comment regarding the potential cost, if any, of providing on-site and remote access, under the bill, to library research resources. Information is still be developed and updates will be provided when additional information is obtained as a result of this request.) Potential impacts from the bill may be as follows:

(1) The bill could potentially result in minimal additional costs to state educational institutions relating to programming and production of library cards to provide access to library research resources. Ultimately these costs would depend on the number of additional users.

(2) There could be additional licensing or subscription costs to extend access to copyrighted material in electronic medium (such as electronic books or electronic periodical databases) to additional users who are not students enrolled in, or employees of, state educational institutions. The extent to which additional subscription fees may be required is unknown at this point, and may vary depending on the database and the database provider. Information received to this point indicates that some databases may require additional subscription fees and others will not require additional subscription fees.

(3) State educational institutions may require additional software resources relating to network firewalls to allow remote access to library resources by legislators or LSA staff. An educational institutions firewall regulating access to its computer network which would presumably include library online resources. The extent of this cost is unknown but could be minimal if institutions and their libraries already allow remote access by students and employees.
